

Managing Chronic Disease & Social Determinants of Health in Primary Care Using a Team-Based Care Model

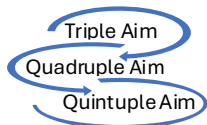

Monefa M. Anderson, MPA, RN-BC, NEA-BC

Background

Team-Based Care (TBC)

Team-based, primary care models support the management of chronic conditions such as hypertension and diabetes.

TBC supports **The Quintuple Aim** – to improve patient and provider experience, improve health outcomes, reduce healthcare costs, and achieve health equity

Intervention

TBC + Clinical Care Pathways

Introduced clinical care pathways into TBC to improve clinical measures and reduce ED and IP admissions

A cohort of 24 patients received the intervention and showed promising results

FINDINGS

89% & 83% reduction in ED & Inpatient admissions, positive clinical outcomes & >100K in cost savings

Findings
